Education

University of California, Berkeley, BS in Data Science, Economics – Berkeley, CA, USA Jan 2023 – May 2026

- Took Classes in Machine Learning, Deep Learning, Causal Identification/ Inference, and Statistics

Ohlone College, AA in Economics – Fremont, CA, USA May 2021 – Dec 2023

- Took lower division Requirments in preperation for transfering to a 4 year university; Completed IGETC Certification

Experience

Reserach Assistant, Berkeley Artifical Intelligence Reserach (BAIR) – Berkeley, Califo- Aug 2025 – present
rina

Joined Berkeley Aritifical Intelligence Lab advised by Professor Serina Chang Looking into if LLMs predict public opinions on novel current events

Forward Deployed Engineer, Snorkel.ai – Redwood City, California June 2025 – present

Wrote and deployed LLM as a judge evaluations for Expert Contributors. Wrote internal Model evaluations for LLM Model benchmarking using novel questions. Performed Data engineering to transform data for client's desired format for training data.

Reserach Assistant, Universtiy of California, Berkeley (Economics) – Berkeley, Califo- June 2024 – June 2025
rina

Conducted EDA, web scraping and data/ regression analysis on political corruption using Python, pandas, Selenium, Pyteseract, and R ; Aided research work by organizing and developing research design and Writing papers based on the results Conducted research on female labor outcomes in India in RCT setting.

Peer Reviewer, Berkeley Economic Review – Berkeley, California Jan 2024 – present

Reviewed undergraduate research papers, focusing on econometric validity and methodology.

Vice President, Associated Students of Ohlone College May 2022 – May 2023

Managed and led orgainiziton with budget of over \$400K; allocated \$28K in need-based grants ; Led events with 100+ attendees, collaborating with administration, students and faculty.

Projects

Public Polling Prediction via LLMs (Data Science Honors Thesis) Fall 2025

Designed and executed a research project evaluating how large language models estimate public opinion on newly emerging real-world events, using temporally accurate Wikipedia revisions and survey benchmarks. Built a full experimental pipeline to scrape event context, collect model outputs across multiple elicitation formats (next-token, verbalized JSON, and free-text), and evaluate performance using metrics like error, Wasserstein Distance, and KL divergence. Analyzed model stability across events and formats, documenting biases, limitations, and methodological rigor to support reproducible computational social science research.

Gitlet Summer 2024

Basic implementation of all git commands except git remote commands

Customer Service Natural Language Processing Summer 2025

Designed and implemented Data pipeline to classify customer service requests using a local LLM to create the initial classification on a subset of the data, then trained a neural network with transfer learning to classify the requests for each week, month and year using NLP.

Genetic Algorithm hyperparameterization with Neural Networks

Spring 2025

Constructed models predicting breast cancer incidence and diabetes incidence using a custom neural network using 1 dimensional residual connections. Used a genetic algorithm to find the optimal hyperparameters of the neural network.

Cargo Reallocation and Production Recapture in the Chesapeake Bay Network Following the Key Bridge Closure

Spring 2025

Conducted research exploring the causal impact of the collapse of the Francis Scott Key Bridge on trade flows within the Chesapeake bay, and the wider eastern seaboard using Difference in Differences.

Skills

Programming: Proficient with Python, SQL, C++, Java, and Git; data structures, and Machine Learning/ Data Modeling

Mathematics: differential equations, calculus, and linear algebra, probability and statistics

Libraries: Pytorch, scipy, pandas, numpy, selenim, XGBoost, matplotlib, Scikit-learn, and Hugging Face
